PARAMVEERSINH MAHIDA

CYBERSECURITY PORTFOLIO | IIT KANPUR B.CYBER. 2027 ASPIRANT

PROFILE

Class 12 student at Jawahar Navodaya Vidyalaya, Anand, building a foundation in programming, computer networking and practical cybersecurity. Interested in understanding how systems work, how they fail, and how to protect them.

ABOUT

I am a Class 12 Science student with a growing interest in cybersecurity, computer systems and ethical security testing. I am developing my skills through structured learning and hands-on practice. My current focus is strengthening Python and networking fundamentals before moving into Linux, security tools and documented lab projects.

CURRENT LEARNING

Area	Current focus
Python	Variables, conditions, loops and introductory functions
Networking	IP and MAC addressing, DNS, routers and basic network concepts
Cybersecurity	Building foundational knowledge; practical labs to be added as completed

PROJECT ROADMAP

The projects below are planned learning projects. They are not presented as completed work. Each will be added to the portfolio only after implementation, testing and documentation.

01 · Python Password Strength Checker

Use Python to assess basic password characteristics and explain safer password practices. Evidence: source code, test cases and limitations.

02 · Network Traffic Analysis

Capture and inspect traffic in an authorized lab using Wireshark. Evidence: sanitized screenshots, protocol observations and a short report.

03 · Linux Security Lab

Practise users, permissions, processes and basic system-hardening concepts in a safe virtual lab. Evidence: commands, notes and results.

04 · Mini SOC Log Analyzer

Parse sample authentication logs and flag selected patterns. Evidence: code, sample dataset, detection logic and false-positive discussion.

05 · Web Security Practice Lab

Study common web vulnerabilities using intentionally vulnerable training environments. Evidence: reproduction steps, impact and remediation notes.

CAREER DIRECTION

Long-term interests: Security Operations Centre (SOC) analysis, cybersecurity engineering and ethical security testing. Immediate priorities: strengthen programming and networking, practise safely, and learn to explain technical findings clearly.

PROJECT EVIDENCE CHECKLIST

For each completed project, document: problem statement · objective · tools · authorized environment · method · screenshots or outputs · results · limitations · remediation or improvements · what I learned.

Accuracy note: This is a starter portfolio. Planned projects are clearly labelled as planned. Add only truthful, verifiable achievements, certificates, competition results and completed project evidence. Admission requirements for 2027 should be checked against IIT Kanpur’s official notification.
